

# **Rocket Smash 3D Documentation**

## **Overview**

The **Rocket Smash 3D** project is thoughtfully developed and user-friendly. Function names are clear, and scripts provide step-by-step guidance. This documentation explains the project folders functions. If you encounter any issues, please contact us at [blackrosedevelopers@gmail.com](mailto:blackrosedevelopers@gmail.com).

## **Project Structure**

### **1.Art**

Art folder is subdivided into four folders.

#### **A. Materials**

Contains 19 various materials used in the game, which can be customized with different colours or sprites.

#### **B. Models:**

Contains 7 unique 3D models of objects in the game (FBX)

#### **C. Textures:**

Contains 10 textures of models that can be applied to materials (PNG)

#### **D. Sprites:**

Contains 4 UI buttons that can be used in different game menus (PNG)

### **2. Prefabs**

The Prefabs folder includes four main categories:

- **Gameplay:** 8 prefabs of different objects in gameplay for level design.
- **Particles:** 5 unique particle effects with different materials.
- **Nature:** 4 prefabs that can be used in the scene
- **UI:** 5 Prefabs of the game menus.

### **3. Scenes**

- **Scene-1:** the sample level of the game.

### **4. Scriptable Objects**

- 4 different Scriptable Objects (Contents, Gameplay Data, DataStorage and UIData) to save coins, gems or level info.

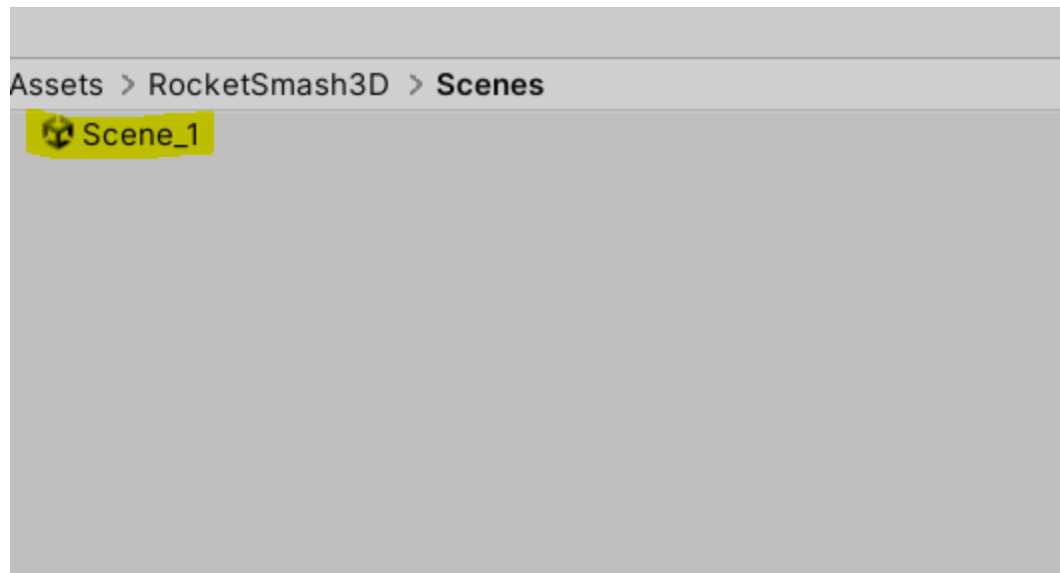

### **5. Scripts**

16 Scripts are categorized into three folders, with clear names and functions to ensure easy understanding.

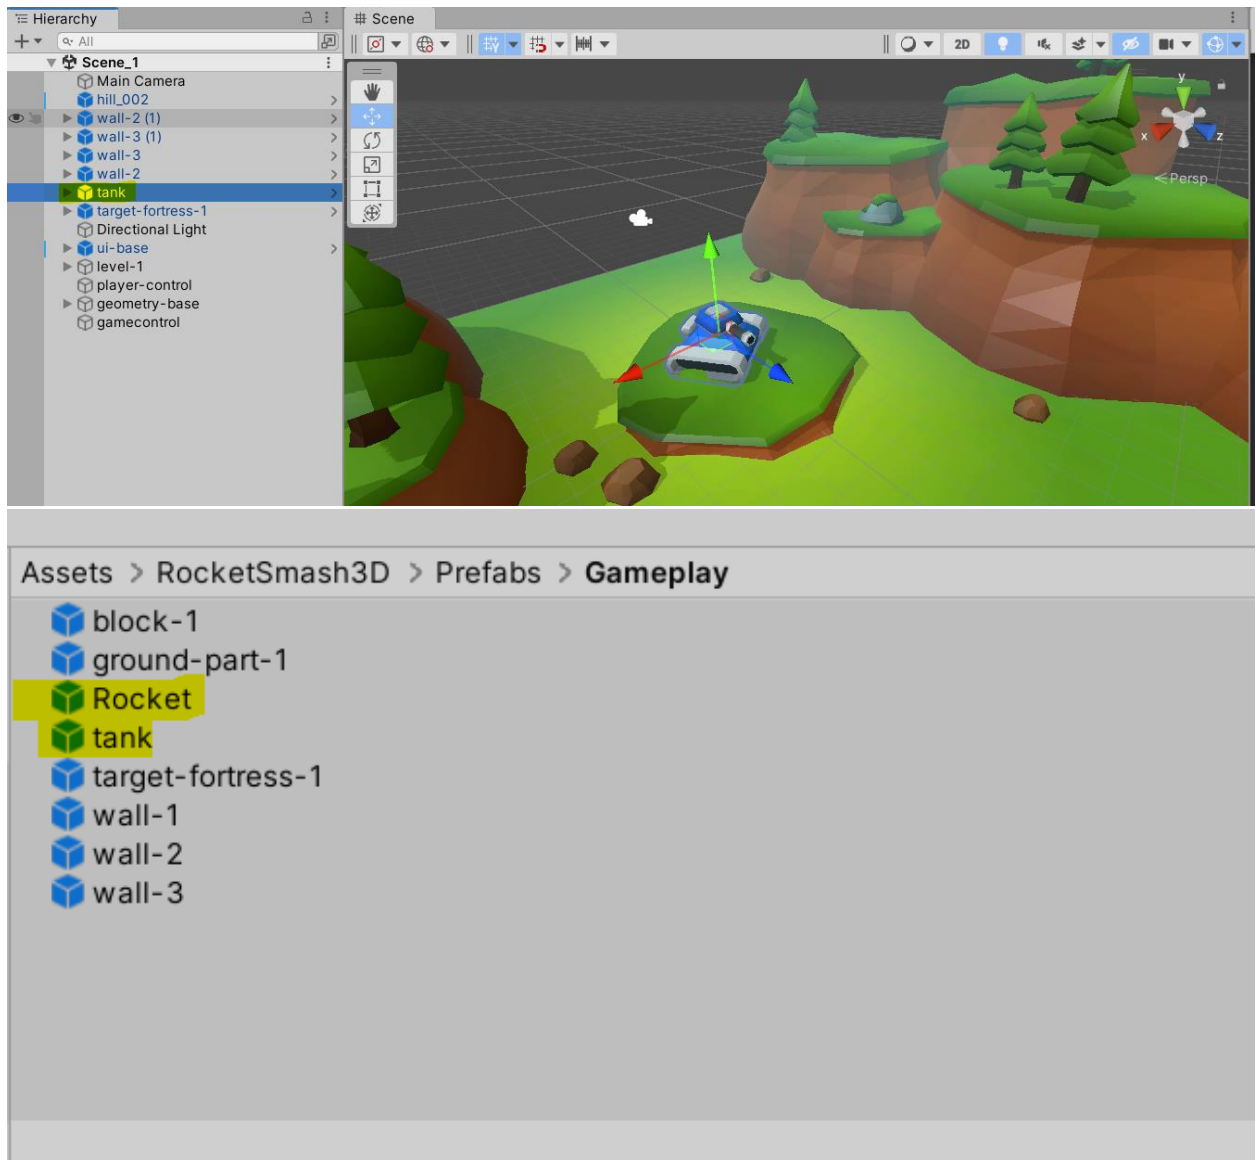

## **How to set up scene:**

Levels should be designed in 3D scenes

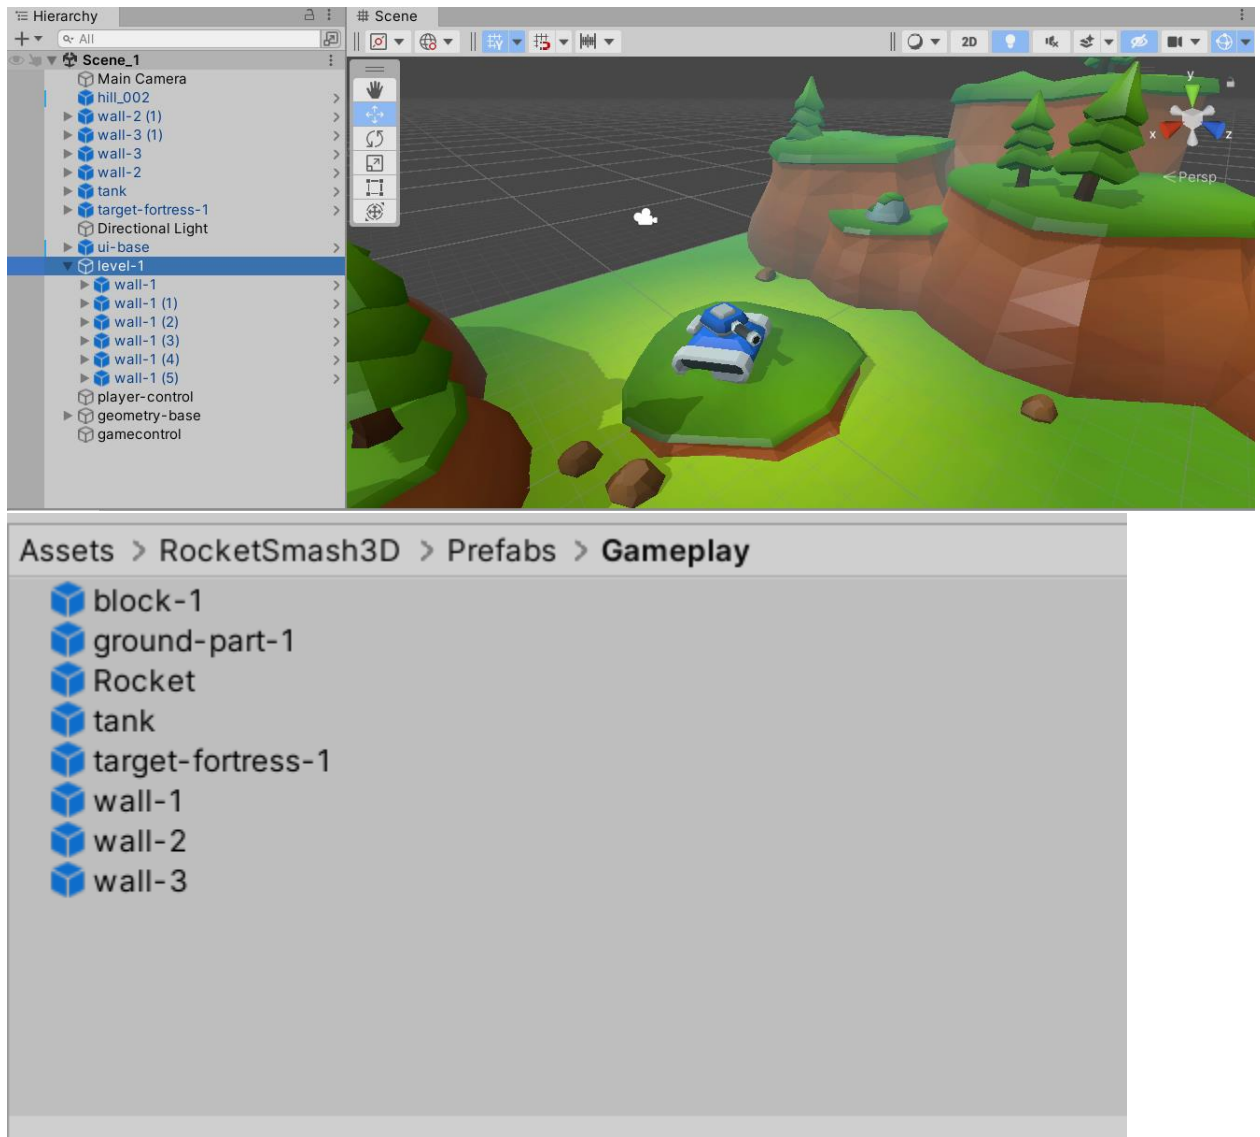

- 1- Navigate to Project – Scenes folder. Double click on Scene-1 to enter the main scene.

- 2- Find Tank prefab in the scene which your Rocket prefab starts moving from there. You can find both in prefabs-gameplay folder.

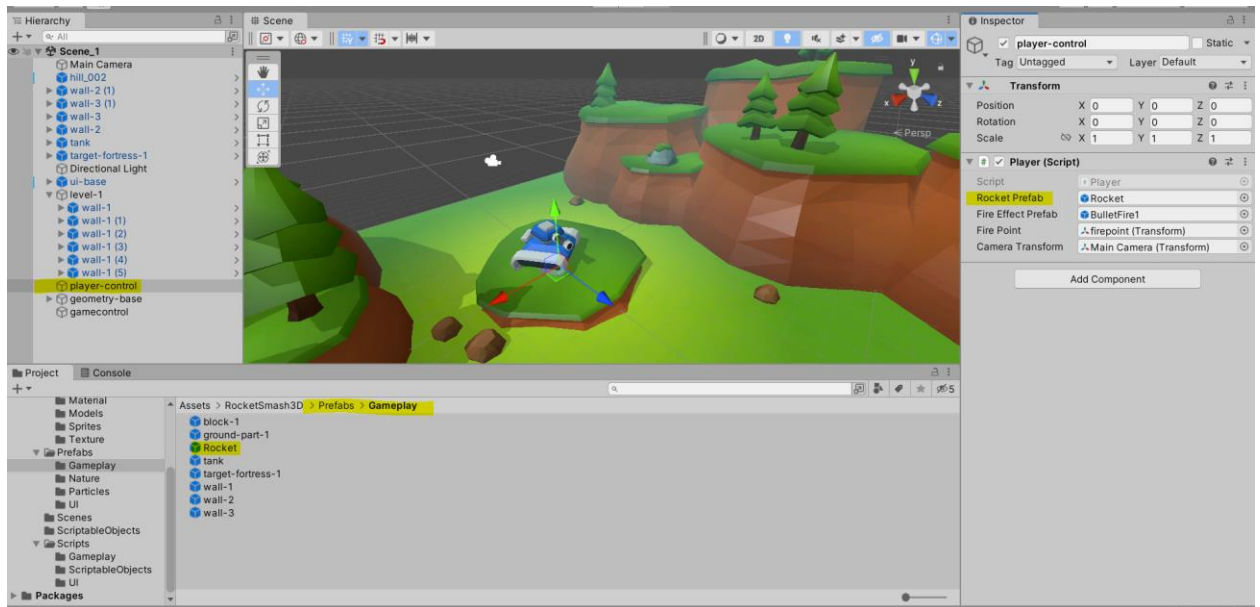

3- In the scene, you can see level-1 game object inside which we have different prefabs from prefabs – gameplay folder. You can design your level with these prefabs in a way that you desire.

- 4- Lastly if you need to change the Rocket prefab (for example its color or other attributes), you need to first create a new prefab of Rocket in Prefabs-Gameplay folder and then find player control

game object in the scene and assign the new rocket to it.
